PDFViewer Introductory

|	
New MainWindow	⌘N
Open PDFs	⌘O
Open Notes	
Close	⌘W
Save Notes	⌘S
Print...	⌘P

To get start, open PDFs or notes, use the menu: select   .

➢ This application can only open one MainWindow (shown as below). So if the MainWindow already opened, the MainWindow select item will be hidden.

➢ During the selection of PDFs or notes, you can use multiple selection.

  o When you open a note, the application will automatically try to open the associated PDF. If it cannot find it. It will pop up an error window to show the details.

  o When you save a note, it will just save notes in the same directory with the PDF. Such as, if the PDF is xxx.PDF. Then the note will be a file named xxx.PDF.note under the same directory with the PDF.

  o When open a PDF, it will also try to load the note at the same time.

1. outlineView, for showing bookmarks, notes and search results.
